
PROJECTS

Warga-Ku

Created an online system for managing resident information, family records, village details, and public services. It features an admin dashboard for easy data handling and community services.

Fur u Ture

Created a user-friendly, responsive furniture marketplace website with a modern Scandinavian design, emphasizing an intuitive experience for displaying furniture products.

Network Infrastructure Design

Created and tested a basic network setup with Cisco Packet Tracer. Set up routers and switches, assigned IP addresses, and checked network connections using basic CCNA principles.

Virtual Penetration Testing Lab

Created a virtual cybersecurity lab with VMware and Kali Linux to learn basic penetration testing, network scanning, and vulnerability assessment in a safe environment.

DMCare

Created a web-based system for the School Health Unit (UKS) to manage patient records, health data, and administrative tasks. Utilized React.js and Supabase for real-time data handling.

GIS of Waqf Land Darussalam Gontor

Created a WebGIS tool for managing waqf land assets with interactive maps and spatial analysis. Included features for topology validation, buffer analysis, and spatial visualization to enhance asset management and decision-making.

Pictples App

Created a simple web-based photobooth app that uses the device camera. Users can easily take photos directly in their browser with a clear and intuitive interface.

ChainedbyMath

Created an engaging educational game with math quizzes to boost student learning. Built with HTML5 for an interactive and fun experience.

HolisticCounseling

Developed a web-based expert system to identify students' talents using the Certainty Factor method. The system assists counselors by providing data-driven recommendations based on user responses and predefined expert knowledge.

INTERNSHIP INTERESTS

Website Development, UI/UX Design, Data Analytics, Geographic Information Systems (GIS), Cybersecurity.
